Description

For online pets vet system three web forms should be created:

- Pet registration Form
- User registration Form
- Search Form

User Registration Form

Should have inputs for:

- Username
- email
- password
- birthdate
- Address
- gender
- options whether users wants to subscribe for:
    - News about promotions
    - Notification for vaccination
    - News about special offers
- Submit Button

Search Form

Should have different search criterias:

- Search Field
- Filter by pet owner's name
- Filter by user town
- Filter by pet type (options [cat, dog, reptile, fish, insect, rodent
- other])
- Filter by Subscription (option News about promotions, Notification for vaccination, News about special offers)
- Filter by pet breed
- Filter by pet birthdate
- Search Button

Pet Registration Form

Should have:

- Pet name
- Pet type (drop box [cat, dog, reptile, fish, insect, rodent
- other])
- Pet breed
- Pet owner
- Birthdate
- Description (text area with free text)

- drop down with the color
- Submit button

Requirements:

- All three forms should have consistent UI. Their UX should be the same.
- Each page has links to the other two in its main menu
- Use Github fo version control and sync
- Use HTML5 CSS and java script
- Input validations for the field should be implemented
- The back end is not available at the moment
- There should be no bugs (at least no major once).
